

EVENITY[®]

(romosozumab-aqqg)

injection 105 mg/1.17 mL

For women with osteoporosis after menopause at high risk for fracture

BUILD STRONGER BONES WITH THE HELP OF EVENITY[®]

Rapidly reduce your spine fracture risk and build new bone in 12 months with EVENITY[®]

INDICATION

EVENITY[®] is a prescription medicine used to treat osteoporosis in women after menopause who are at high risk of fracture, or cannot use another osteoporosis medicine or other osteoporosis medicines did not work well.

IMPORTANT SAFETY INFORMATION

EVENITY[®] can cause serious side effects, including increased risk of having a heart attack, stroke, or death from a cardiovascular (heart or blood vessel) problem. Call your healthcare provider or get emergency help right away if you have any of these symptoms: symptoms of **heart attack**, which may include: chest pain or pressure; shortness of breath; feeling light-headed or dizzy; or symptoms of **stroke**, which may include: headache; numbness or weakness in face, arm, or legs; difficulty talking; changes in vision or loss of balance. Before you receive EVENITY[®], tell your healthcare provider if you have had a heart attack or stroke, especially if it has happened in the past year.

Please see additional Important Safety Information on page 6.

WHAT IS OSTEOPOROSIS?

Osteoporosis is a bone disease that occurs when your body loses too much bone, makes too little bone, or both. While you can't feel bones weakening, osteoporosis can make them more likely to break from a fall.

IMPORTANT SAFETY INFORMATION

Do not take EVENITY[®] if you: have low blood calcium; or are allergic to romosozumab or any ingredients in EVENITY[®]

Please see additional Important Safety Information on page 6.

THE TIME TO TREAT IS NOW

When you live with postmenopausal osteoporosis, the risk of breaking another bone is real. In fact, after an osteoporosis-related fracture, **you're 5x more likely to suffer another fracture within 1 year.**

That's why it is so important to **build new bone.**

Don't waste precious time. Help reduce your risk of a potentially life-altering break by building stronger bones with the help of EVENITY[®].

DID YOU KNOW?

Osteoporosis isn't an inevitable part of aging. You can manage your osteoporosis through prescription treatment and lifestyle changes to help reduce your risk of fracture.

PROVEN RESULTS

At 12 months, EVENITY[®]
SIGNIFICANTLY REDUCED the risk of
SPINE FRACTURES in women by

73%

This study followed 7,180 women with postmenopausal osteoporosis receiving EVENITY[®] or placebo (a treatment without medicine) for 12 months. Women receiving EVENITY[®] had fewer new spine fractures (0.5%) than women receiving placebo (1.8%) at 12 months. Reductions in fractures other than the spine were not significant at 12 months.

IMPORTANT SAFETY INFORMATION

EVENITY[®] may cause serious side effects. Possible serious side effects include serious allergic reactions, low blood calcium, severe jaw bone problems, and unusual thigh bone fractures.

Please see additional Important Safety Information on page 6.

Help build new bone in **JUST 12 MONTHS**

In the same clinical study, women on EVENITY[®] rapidly increased the bone mineral density of their lower spine and hip at 12 months.

Pelvis bone samples taken at 12 months

With EVENITY[®]

Without Treatment

For illustrative purposes only. Bone samples were taken from 2 different women from a substudy consisting of 139 women with postmenopausal osteoporosis. Images selected are from women who were close to the average in each group.

THINGS TO CONSIDER

What are the most common side effects of EVENITY®?

In the same study of postmenopausal women with osteoporosis, the most common side effects occurring $\geq 5\%$ of the time or more were:

Side Effects:	EVENITY®	vs	Placebo
Joint Pain	13.1%		12.1%
Headache	6.6%		5.8%

These are not all of the possible side effects of EVENITY®. Talk to your doctor to learn more about the potential serious side effects of EVENITY® and see Important Safety Information on page 6 of this brochure.

Ask your doctor if treatment with EVENITY® is right for you

As with any new medication, there are risks and benefits to think about as you discuss EVENITY® with your doctor. While there are side effects to consider, some of which can be serious, it's also important to weigh the risks of not starting treatment. Your doctor can help you understand if EVENITY® is right for you.

HOW IT WORKS

EVENITY® is the FIRST AND ONLY OSTEOPOROSIS treatment that WORKS IN 2 WAYS

EVENITY® increases bone formation and, to a lesser extent, decreases bone loss.

Image is for explanation only and is not meant to imply benefits.

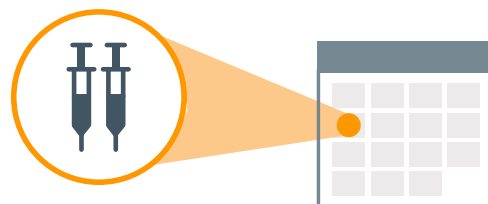

DID YOU KNOW?

If you have osteoporosis after menopause and a high risk for fracture, diet and exercise alone may not be enough. If you've experienced an osteoporosis-related fracture, you may also need to start a treatment that reduces fracture risk.

Please see additional Important Safety Information on page 6.

GETTING STARTED

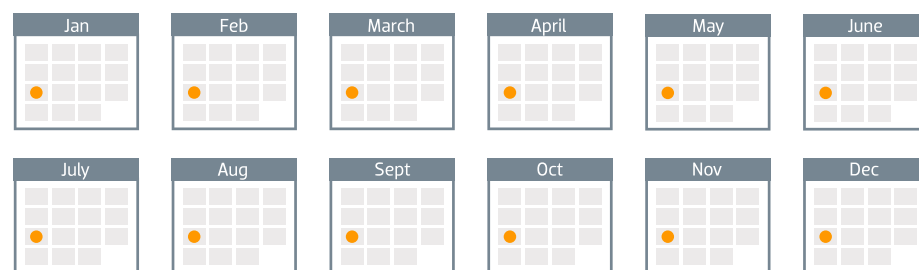

HELP BUILD STRONGER BONE with 12 doses

1 DOSE (2 SHOTS) GIVEN **MONTHLY** DURING THE SAME VISIT

FOR **12 MONTHS**

Keep your calendar handy to check off each office visit in your journey to building new bone.

Your EVENITY[®] dose is given by a healthcare provider. Take calcium and vitamin D as your doctor tells you to while you receive EVENITY[®].

Keep the new bone you've built

As you complete your treatment of 12 doses of EVENITY[®], talk to your doctor about transitioning to a different medicine to help protect the bone you've built.

IMPORTANT SAFETY INFORMATION

The most common side effects of EVENITY[®] are joint pain and headaches.

Please see additional Important Safety Information on page 6.

IMPORTANT SAFETY INFORMATION

What is the most important information I should know about EVENITY®?

EVENITY® can cause serious side effects, including increased risk of having a heart attack, stroke, or death from a cardiovascular (heart or blood vessel) problem. Call your healthcare provider or get emergency help right away if you have any of these symptoms: symptoms of **heart attack**, which may include: chest pain or pressure; shortness of breath; feeling light-headed or dizzy; or symptoms of **stroke**, which may include: headache; numbness or weakness in face, arm, or legs; difficulty talking; changes in vision or loss of balance. Before you receive EVENITY®, tell your healthcare provider if you have had a heart attack or stroke, especially if it has happened in the past year.

Do not receive EVENITY® if you: have low blood calcium; or are allergic to romosozumab or any of the ingredients in EVENITY®.

Before receiving EVENITY®, tell your healthcare provider about all your medical conditions, including if you:

- have a history of other heart or blood vessel problems
- have low blood calcium
- cannot take daily calcium and vitamin D
- have kidney problems or are on kidney dialysis
- plan to have dental surgery or teeth removed

What are the possible side effects of EVENITY®?

EVENITY® may cause serious side effects, including:

Serious allergic reactions have happened in people who receive EVENITY®. Call your healthcare provider or go to the nearest emergency room right away if you have any symptoms of a serious allergic reaction including: rash; hives; swelling of the face, lips, mouth, tongue, or throat which may cause difficulty in swallowing or breathing.

Low calcium levels in your blood (hypocalcemia). EVENITY® may lower the calcium levels in your blood. Your low blood calcium should be treated before you receive EVENITY®. Call your healthcare provider if you have symptoms of low blood calcium such as: spasms, twitches, or cramps in your muscles; numbness or tingling in your fingers, toes or around your mouth.

Severe jaw bone problems (osteonecrosis) may occur. Your healthcare provider should examine your mouth before you start EVENITY® and may tell you to see your dentist. Ask your healthcare provider or dentist about good mouth care.

Unusual thigh bone fractures. Symptoms of this type of fracture include new or unusual pain in your hip, groin, or thigh.

The most common side effects of EVENITY® include joint pain and headaches.

These are not all the possible side effects of EVENITY®. Call your doctor for medical advice about side effects.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch, or call 1-800-FDA-1088.

Please see EVENITY® full Prescribing Information, including Medication Guide.
